SUMMARY

ASP.NET Developer with 1.5+ years of experience designing and building ASP.NET Core Web APIs, application layers and SQL Server databases across .NET Framework, .NET Core and .NET 8. Shipped inbox-to-order automation on Microsoft Graph, a Stripe/OAuth2-secured API migration and AI-validation workflow automation. Work independently on production modules, collaborate closely with front-end developers, and bring strong problem-solving and attention to detail to debugging live services. Also experienced with full-stack development using the MERN stack.

TECHNICAL SKILLS

Backend	C#, ASP.NET Core Web API, OWIN / Web API 2, ASP.NET MVC, .NET Framework 4.6.1, .NET Core 3.1, .NET 8
Backend (personal)	ASP.NET Core Minimal API, EF Core, SignalR
Data	SQL Server (schemas, T-SQL, stored procedures), PostgreSQL, MongoDB / Mongoose
Integrations	Microsoft Graph API, Zoho CRM, RingCentral (Call-Out REST, webhooks), Stripe, OAuth 2.0, JWT
Background jobs	Hangfire, WebJobs, Windows Scheduled Jobs
Also	Node.js, Express, React, Next.js, Tailwind CSS, Git

PROFESSIONAL EXPERIENCE

Software Developer · Tudip Technologies Pvt. Ltd — Mar 2025 to Present

- **Order ingestion via Microsoft Graph:** built a .NET Core service that reads order emails by subject match, parses them against per-client HTML templates (3 clients) and inserts orders into SQL Server, removing manual order entry.
- **Legacy MVC to .NET Core Web API:** extracted backend logic from an ASP.NET MVC app into a standalone Web API for a full site revamp, working with the front-end team so frontend and backend ship on independent release cycles. Added a Stripe integration secured with OAuth2 client credentials, configured on both the external app and the API.
- **AI-assisted report validation:** orchestrated an AI validation app with Hangfire background jobs at the editor stage; failed reports are auto-reassigned to the researcher with a per-question failure summary.
- **Zoho CRM:** built a Zoho-facing service on the OWIN Web API using OAuth, mapping accounts and contacts into the company portal while keeping CRM sync isolated from unrelated modules.
- **RingCentral telephony:** integrated Call-Out REST for outbound calls from the portal, plus webhooks that validate events and keep call state in sync.
- Ship and maintain ASP.NET Core Web APIs on active product modules; own SQL Server schemas, queries and stored procedures on live data.
- Currently building a workflow orchestrator that drives operations across existing internal APIs based on decision logic.

PROJECTS

RelayForge · DAG background job scheduler (.NET 8, Next.js) — relay-forge.vercel.app GitHub

- DAG-based job engine on .NET 8 (Minimal API, EF Core, PostgreSQL) with a pure domain layer for cycle detection, topological ordering, readiness and job finalization.
- Lease-based workers; exponential backoff with jitter before dead-lettering; a reliability sweep reclaims expired leases after a crash or restart.
- Next.js UI streams live job state over SignalR across six guided scenarios; a job with one broken branch ends PartiallyFailed. Domain unit tests and CI.

Ethix Portal · IEC research-ethics proposal portal — ethixportal.netlify.app GitHub

- Full-stack MERN portal (React/Vite, Express, MongoDB) replacing spreadsheets and email threads for long IEC proposal forms.
- Four roles (researcher, reviewer, scrutiny, admin) with JWT auth and per-route role middleware; a MongoDB schema tracking eight explicit states from draft to approved or rejected.
- Multi-step wizard with save-as-draft across 5+ form sections, and Multer document uploads attached to proposal records.

EDUCATION

B.Tech in Information Technology · Zeal College of Engineering and Research, Pune — 2020 to 2024
